

# Light

(photons) particles  
↓ Newton

photoelectric effect

$\lambda$ : wavelength

$$\lambda = \frac{c}{f} \rightarrow \text{speed of light}$$

quantized energy

$$E = h f$$

Planck's constant  
 $= 6 \times 10^{-34} \text{ J.s}$

Light travels in a straight line as long as it travels in the same medium

Reflection

Refraction

# Reflection:

Law of reflection

$$\theta_i = \theta_r$$

angle of incidence  
= angle of reflection

# Refraction:

$n$  = index of refraction  $\geq 1$

$$= \frac{c}{v} \rightarrow \text{speed of light}$$

$v \rightarrow$  speed of light in this medium

incident light

medium 1

$$n_1 = \frac{c}{v_1} ; \lambda_1 = \frac{v_1}{f_1}$$

medium 2

$$\lambda_2 = \frac{v_2}{f_2}$$

Snell's Law:

$$\frac{\sin \theta_2}{\sin \theta_1} = \frac{n_1}{n_2} = \frac{v_2}{v_1} = \frac{\lambda_2}{\lambda_1}$$

$$n_1 \sin \theta_1 = n_2 \sin \theta_2 ;$$

$$\theta_2 = \sin^{-1} \left[ \frac{n_1}{n_2} \sin \theta_1 \right]$$

$$\boxed{f_1 = f_2}$$

$$n_1 > n_2 \Rightarrow \theta_2 < \theta_1 \quad \left\{ \quad n_1 < n_2 \Rightarrow \theta_2 > \theta_1 \right.$$
